

Education

The successful automotive repair shop is continually faced with keeping up on the latest changes and improvements in the technology involved in keeping your vehicle running down the road in a safe and efficient manner. As in any profession, this requires continuous ongoing education.

Technicians today face challenges they never dreamed of ten to fifteen years ago. The electrical systems of today's vehicles now involve complicated electronic circuitry, braking systems now involve computerized hydraulics, and drivetrains (transmission) are computer controlled as well.

These changes have forced the auto repair industry to develop the education, training and new diagnostic repair equipment necessary for maintaining and servicing this new technology. Our suppliers play a major role in this education process by providing us with ongoing technical support, training and informative industry publications. They do this because they understand that as in any industry, providing training and education is the best investment a business can make.
